

## TRIMOD HE

## DEVELOPMENTS IN TECHNOLOGY

HIGH performance HIGH efficiency LOW environmental impact

Legrand's modular UPS know-how goes back more than 20 years, when the first ever modular UPS were introduced in 1993. Since then, continuous firmware development and research on control and hardware components have led to no stop improvements in system reliability, quality and technical performance.

Continuous research combined with modern production methods has led Legrand to offer the market a cutting-edge, top-performing product: certified efficiency up to $96 \%$ and unity power factor.

Combining high density with a structural design that optimises the space, the new TRIMOD HE systems is the ideal solution for advanced energy management and cost containment.

## CERTIFIED EFFICIENCY

 One of the highest values in the market

The European Code of Conduct requires a minimum value of $\mathbf{9 2 \%}$. TRIMOD HE is up to $4 \%$ more efficient, thus effectively dividing by 2 all UPS energy losses.

## $\mathrm{kVA}=\mathrm{kW}$ POW FACTOR

## INCREASED POWER

Thanks to their unity power factor the new TRIMOD HE UPS guarantee maximum real power; $11 \%$ more than competitor products offering 0,9 power factor, fully $25 \%$ more than those of 0.8 power factor.

## TRIMOD HE

## EXPANDABLE SCALABLE MODULAR VERSATILE

The innovative concept of THREE-PHASE modularity, consisting of INDIVIDUAL SINGLE-PHASE MODULES which feature in the entire TRIMOD HE range, allows you to optimise power availability, increase system flexibility and reduce the total cost of ownership (TCO).

The standardised structure, consisting of smaller and lighter modules, makes it easier to transport and install the UPS systems.
All the components are self-configuring and integrate a Plug\&Play connection system to make all diagnostics, maintenance and future expansion phases easier.

Because the TRIMOD HE system is versatile and programmable, it is also possible to:

- supply three independent single-phase lines, assigning a different priority to each one, in terms of operating time
- offer three different input/output configurations in a single cabinet: $3 / 3,1 / 1,3 / 1,1 / 3$
- increase the duration of the average battery life thanks to the Smart Charging System

Compact, lightweight single-phase power module (only 8.5 kg )

## REDUNDANCY ON SINGLE-PHASE LOAD

In a system with a three-phase power supply and a single-phase load there will be no power loss if one of the modules fails, as the power will be delivered by the other operational modules.

## REDUNDANCY

## ON THE PHASES

In a system with three independent outputs, it is possible to set the redundancy on the single phases.
If one of the power modules fails, the modules in the same phase take over for the defective module.

## HIGH LEVELS OF REDUNDANCY

Thanks to the construction technology of the TRIMOD HE UPS systems, you can set various redundancy levels so that maximum continuity of service is always guaranteed.

## TRIMOD HE

## POWER CABINET WITH MULTI CONTROL BOARD

In order to increase service continuity and consequently decrease failures (limit the single point of failure) the new cabinet are provided with more control modules, from 1 to a maximum of 4 , so as to ensure redundancy also on control.

## Redundancy on the control

In UPS systems incorporating several control modules, failure of one of the control boards results in the modules it controls being switched off. However, continuity of service is assured by automatic distribution of the lost power over the other modules.

## HOT-SWAP

Thanks to the multi control board system you can replace the power modules without having to turn off the UPS.

## Separate batteries

The new multi control board cabinet, also allows you to associate each control a separate battery pack.

## POWER CABINET WITH DUAL INPUT FUNCTION

TRIMOD HE, in addition to the standard cabinet, it offers cabinet with power up to 80 kW and DUAL INPUT function. The new cabinet can be fed two AC sources is source separated: the configuration can be selected at installation time and easily obtained by removing a bridge from the input terminals.

## POSSIBLE CONFIGURATIONS

SCALABLE SOLUTION
FROM 40 kW UP TO 80 kW

SCALABLE SOLUTION
FROM 60 kW UP TO 80 kW

REDUNDANCY SOLUTION 60 kW N+1

## TRIMOD HE

## Double conversion VFI three-phase modular UPS

* Standard configurations with 3-3 distribution (multi IN/OUT conf available on request)
?

## TRIMOD HE

## Long back up time table

* Configurations with battery cabinet ( $20 \times 94 \mathrm{Ah}$ ).

Dimensions and weight: A x L x P $1635 \times 600 \times 800(\mathrm{~mm}), 785 \mathrm{~kg}$

## TRIMOD HE

Examples of configuration

TRIMOD HE 10 kW 2 modular cabinets Backup time 68 min Weight 527 kg

TRIMOD HE 30 kW
1 modular cabinet, 1 not modular cabinet ( $20 \times 94$ Ah)
Backup time 50 min
Weight 890 kg

TRIMOD HE 15 kW
2 modular cabinets
Backup time 57 min
Weight 550 kg

TRIMOD HE 60 kW
1 modular cabinet, 2 not modular cabinets ( $20 \times 94 \mathrm{Ah}$ )
Backup time 50 min
Weight 1715 kg

## Reliable

Directly present in more than 70 countries and servicing its products in more than 150 countries worldwide, a team of qualified engineers is available 24/7/365 to support your UPS system to ensure power quality and availability to the most critical loads.

## Excellent

Legrand's competitive edge lies in its ability to provide high value-added UPS systems and services for both end users and business partners.
For Legrand, creating value means coming up with solutions for lower energy consumption, but also integrating product design into the overall development process. With around 200000 catalogue items, the Group also provides all products required for electrical and digital building installations, particularly as integrated systems, finding solutions to fit everyone's needs.

## Tailor-made

Legrand offers a complete range of specific solutions and services to meet customer requirements:

- Technical pre-sales support at the project design stage
- Factory acceptance test
- Supervision of installation, testing and commissioning, site acceptance test
- Operator training
- Site audit
- Warranty extension
- Annual maintenance contract
- Fast intervention on emergency call

## SITE INSPECTION, INSTALLATION SUPERVISION.

We perform a comprehensive check of the UPS environment to ensure safety and fault-free operation.
Our technical experts give manufacturer's recommendations to the site engineer or electrical contractors, and supervise the UPS installation before load power-up.

## SITE TEST, COMMISSIONING.

Our Service Engineers conduct rigorous site tests and full setting-up of the UPS system before going live. They also perform site acceptance tests according to your requirements. Commissioning operations for all UPS are carried out by qualified engineers to guarantee seamless start-up. After the final handing over of the UPS system, a Test and Commissioning report is delivered to you.

We offer on-site training to ensure your equipment's safe and efficient operation.
Troubleshooting courses are also available in our plants for intensive hands-on practice on UPS training equipment.

PREVENTIVE MAINTENANCE
Electronic equipment and power systems, such as UPS, contain life-limited components and parts that must be replaced according to the manufacturer's specifications.
To ensure optimal performance and to protect your critical application from potential downtime, it is crucial to perform
preventive maintenance operations on a regular basis and replace parts when needed. Our Service Contracts include cleaning, IR thermography, measurements, functional tests, event $\log$ and power quality analysis, battery health check, hardware and software upgrades, and technical reports. A Preventive Maintenance Plan is one of the most cost-effective actions that can preserve your initial investment and ensure your business continuity.

## CORRECTIVE MAINTENANCE, EMERGENCY CALL

In the event of an Emergency Call, our worldwide service network, with engineers and spare-parts stocks strategically located as close as possible to your site, guarantees a fast intervention time with $24 / 7 / 365$ assistance.
After connecting his laptop to your UPS, very powerful diagnostic software helps our engineer to identify the fault, thus ensuring short MTTR (Mean Time To Repair).
Corrective actions are performed such as part replacement, adjustments and upgrades to return the UPS system back to normal operation.
